FOREWORD

Dear reader

In this short foreword I want to express some views on my first book in English. By the way, if you want to call this thin book a booklet it is completely OK. Whatever you start calling this product of my thoughts (book, booklet or something else) I hope that your interest in my way of using thoughts will grow and that you will get some inspired thoughts in your brain in a new and surprising way!

Why did I write this book? The core answer to that is twofold. For the first I wanted to express my joy of my philosophical findings I made a few years ago. Because of them I wanted to publish a soft and easy landing to the themes of my personal findings that had broadened my old views of thought. And as a matter of fact I fulfilled that goal and wrote my first personally philosophical book/booklet in my own language - in Finnish - in 2010. After a couple of years I felt a need to widen and sharpen the message of my first text. In addition to that I wanted to write the text in English so that a few friends of mine abroad could read my thoughts. Also, I wanted to give them a try to find my special wave length in the questions and views I quickly discuss in the text.

Why did I write aphorisms and not plain text? That is a good question. And my answer to the question is that for many years I have liked aphorisms. Also, to start philosophical writing with aphorisms was easier and faster for me than producing a longer text with possible (almost) scientific contents and footnotes etc. And to put it even more clear (and obscure) I tell the following thing. Namely, as this "home made" philosophical thinking of mine emerged in me I was rather inexperienced in philosophy but suddenly felt that I understood totally and clearly some principles and arguments written by some very famous philosophers.

Looking for a philosophy? It may be that I've found one already.

Why do my thoughts circle around an entity I define common man everyday philosophy? This is simply because any everyday philosophy belongs to life and is a natural part of it like life itself as all thinking, eating food, drinking water, building a home, talking, walking do. Also, everyday philosophy is a hobby one can enjoy every day from Monday to Sunday, from day to night. Nourish your beliefs and everyday philosophy every day!

Dear reader, I also humbly wish that you will and can understand my way to write English. Of course, I am not a native English speaker. Still I try to express my most important thoughts of the original text in clear English. My intention in this booklet has in deed been not just to translate tens of my Finnish thoughts. In many occasions I have first and foremost tried to find a way to express me directly in English following the syntax of this noble and international language. In addition to that – and to tell a clear example – I confess that I have tried to find good dictionary translations for some uncommon words in everyday language. In many cases I have just relied on my memory based vocabulary. But as an imperfect human being and a bloke talking and writing basic English as a hobby I have not reached any perfection – not at all. But I believe that we can understand each other well enough. (Try vice versa! Why not you write something and translate and modify your text into Finnish! It was a joke. Ha-ha! But all exceptions are allowed!)

All in all I hope that you will stay on track with the text to come in this booklet. Also, I hope that you will at least to some extent grasp the main meaning of the text. If, surprisingly, you reach a level of forecasting to where this text in my view leads to you must be a genius in many ways! If that is the case let me hear from you Mr. or Mrs. New-Prophet-Kant-Wittgenstein-Einstein!

What is your philosophy?

Have a nice and inspiring reading.

In Finland in March 2013

THE UNIVERSE AND I

Where did the universe come from?

Hip hip hooray:

in that sentence

I feel a lot of weight of meaning

– in and before the question mark.

Big Bang?

Did it happen by itself?

Or was there somewhere The Big Band with its notes?

With its correct pre-written notes?

One of the game types we played when I was a kid was
word games.

Bingo, bango, dingo, dango, ee; silly Billy, Piccadilly, bee.
All went in and all came out; our tongue was not a sprout.
That's how we made a smile with the help of wordy pile.
Inside outside of our house always joking like a mouse.

It was harmless fun – sometimes it really made one's
brains refreshed. Sometimes we talked whatever rubbish
came to the tip of the tongue. Sometimes we enjoyed the
peculiarities of our Finnish language by twisting, bending,
wringing, grounding and tossing and speaking out loud it
all. We loved our dung of which we could bake all kind of
delicacies of the language. Many times we kids of the
neighbourhood played our language game of stupid but
non-insulting words. A good laughter was the aim.

Sometimes, however, we talked dirty.

One question remained always unanswered: "Which
came first to be, a hen or an egg?"

Which is the format of our universe, predecessor or
successor?

A giant point of packed energy, a point zero zero zero in
almost nowhere in the coordinate system called nothing.

Then, like in a fraction of a no time at all a total explosion
– a detonation beyond comparison.

And some matter came to be.

Did a plug have time enough and a correct time
adjustment to sparkle the explosion? Did also the plug
explode?

Where did the energy come from?

A vast bang, and as if it came from a very dark emptiness
and helped all materia in the universe to start to arrange
itself to stars, planets, and all kind of celestial space
objects.

Ooh-ooh I am a material boy in a material world.

Mamma mia and oh my stuff called matter.

I just can't get it.

What's the recipe for understanding matter?

An invisible giant start pistol used the first ounces of gun powder and sent the first bullet of universal order into the space-to-become-space-we-know. No fear: the pistol just can't fall on our necks because it turned itself to invisible space powder, too, and the early winds missed our Globe because it did not exist in the very first moments.

My name is Bang, Big Bang.

Hey, wait a minute; I'd so much like to add this pistol into my armour and sword collection. I surely can make a good offer. How many grands? Hey, you just can't be kidding me. Don't pull my leg. It must be somewhere. I'll raise my offer and you'll be satisfied with that big money I can pay you for it.

What, do you really mean my investment policy to be quiet? Quiet? There must have been a stock market in the beginning... and many rich American buyers...

Shut up. There where no silver dollars in the beginning.

Have you ever met a man or a woman who states that he or she has found something interesting to life but for some reasons cannot express it right there where both of you met each other? Maybe this is the case with my CMEDP book right now. But this book is still worth reading, it can inspire and confuse, not to mention irritate and amuse you. This book has a personal touch and a delicate taste to many lines of thought. In this book I show my joy and positivity in my findings that have helped me build my world view to a more balanced one than which I had during and after my earlier commercial studies. Though I feel that it is not the best time to reveal all that I have found via my lay man philosophical thinking I want to guide you, dear reader, to the areas in which I want to produce well thought mental structures to "explain the universe" in my coming books. If this description or the large font of my basic text or any other thing in this book irritates you feel lucky: you have read a book that certainly did not leave you innerly cold. (The large font is there to possibly help elderly people read my text.) Have an interesting and brain stimulating chain of reading moments with my CMEDP book.
